

COMMERCIAL FRYER MANUAL

Model: QSR-FRYER-2000

Installation and Maintenance Guide

- Clean exterior surfaces

Common Issues and Solutions:

Problem: Fryer won't heat oil

Solution: Check power connection, inspect heating elements, verify thermostat settings.

If heating elements are damaged, replace immediately.

- Check safety systems

Problem: Oil temperature fluctuates

Solution: Clean temperature sensor, check for blockages in oil circulation.

- Replace oil filter

Problem: Strange noises during operation

Solution: Check fan motor, lubricate moving parts.

Cleaning Procedures:

1. Turn off power and allow fryer to cool completely

2. Drain oil into proper disposal container

3. Remove heating elements and clean with degreaser

4. Wipe down interior surfaces with sanitizing solution

5. Replace oil filter and refill with fresh oil
